Maule’s Celery

Culture—Celery seed is slow to germinate, and ample time must be given. Sow thinly in early spring and cover lightly. Keep constantly moist. Count on about 400 plants to a packet of seed, about 7,500 plants per ounce or quarter pound per acre. When the seedling plants are 3 inches high they should be clipped at the top, to favor stocky growth, or else transplanted. Celery is mostly grown under flat culture, without trenches, in rows 4 feet apart, 8 inches apart in row. For home use celery is often grown in double rows, 10 inches apart, and plants 6 inches apart in each row, allowing 4 feet of space before setting out another double row. This will permit soil for banking for winter storage without lifting. Ready for use in 110 to 140 days.

This is for banks, terraces, steep or exposed slopes and bare spots in general; in fact, for any place, however dry, stony or barren. It will produce a sod that is absolutely proof against heat or drought, and that cannot be injured by cold. The grasses produce strong, spreading roots, thus preventing heavy rains from washing them out; will withstand exposure, thrives on shallow soils, and at the same time produces much velvety green turf throughout the year.

Maule’s Three Permanent Pasture Mixtures
Best Adapted for Producing an Abundant Hay Crop or for Pasturage

It is true beyond all question that a mixture of grasses produces a better mowing field and subsequent permanent pasture than a mere combination of timothy and clovers. The former will last five or ten years, and sometimes as long as the latter. Timothy “runs out” in a couple of years or so, while a good permanent pasture will last ten or even twenty years. This has been frequently and forcibly shown by experience. In preparing the permanent pasture grass mixtures we employ mainly Kentucky Blue, Timothy, English or Perennial Ry, Italian Ry, Red Top or Herd, Orchard, Meadow Fescue or English Blue, Canadian Blue and Crested Dogtail.

Clovers used in mixtures are Red, Alsike and White. We vary the proportions to suit the different soils.

Any of the above PERMANENT PASTURE MIXTURES:

### Classification of Flowers

Flowers are divided into three classes—Annuals, Biennials and Perennials. Each class is described as follows:

#### Hardy Annuals

Easily raised and suitable for many purposes; excellent for cutting; invaluable for bedding, some for the others for foliage effect. They will always be popular with those who want quick results with the least expenditure of time and money. Some may be started in the open ground in early spring or sown indoors for earlier effect. Plants will flower and die in the one season.

#### Half Hardy Annuals

Seeds should be sown in boxes in the house or in hot-beds during March or April, and the plants set out in the open ground when the trees come into leaf. They will flower for the one season and die.

#### Hardy Biennials

Sow seed as you would the hardy annuals. The plants will not bloom until the following year, after which they die.

#### Half Hardy Biennials

Seeds should be sown as you would the half hardy annuals. These plants require a frost during the winter. They will bloom and die the following season.

#### Hardy Perennials

Seeds may be sown in early spring, or during July and August to produce plants that will flower the following year. Some will bloom in the second year. Seed of some hardy perennials, if sown very early, will produce plants that will bloom the same season. It is unnecessary to give protection to these plants during the winter, but it will prove beneficial to the plants if a covering of leaves, litter or strawy manure is provided. A hardy bed of border, when once established, requires practically no attention and will, if varieties have been properly selected, provide an abundance of flowers from early spring until frost.

#### Half Hardy Perennials

Sow seed as you would the half hardy annuals. If planted out in the open ground they must be lifted before frost, potted up and taken in the house during the winter.

Maule’s Giant Pansies (Heartsease)  Hardy Biennial

For many years, in fact ever since we have been in business, we have given particular attention to Pansy seeds. We assure you that our strains of Pansies are as good as can be found anywhere in the world. Pansies demand good soil, thriving best in a cool, moist but well drained position. Do not plant Pansies in the shade of a tree or building, as this causes straggly plants with very few blooms. Seeds sown in April or May will produce blooming plants the last of June, which will continue flowering until the end of the season. For early spring blooming sow seeds in August and give plants protection during the winter. We know that the results obtained from our Pansy seeds have been so remarkable that this is the reason the demand for this beautiful and popular flower increases with us so much every year.

1614 Maule’s Prize Mixed Giant Pansies

A carefully prepared mixture of all the richest, most exquisite, and largest Pansies known.

Look for blossoms 2½ to 3½ inches across, of perfect texture, embracing an endless variety of colors. Year by year we watch the production of American and European specialists and secure everything truly meritorious for incorporation into our Fraise Mixture.

Pansy seed is a very high priced commodity, and it is next to impossible for the average flower lover to buy all the new sorts on the market. All the types that are really desirable will be found in Maule’s Prize Mixture, which is largely grown for exhibition.

Pkt. 25¢; ¼ oz. 75c; ¼ oz. $1.25; ½ oz. $2.25; 1 oz. $4.25; oz. $8.00

1600 Maule’s Giant Phenomenal

Thousands of our friends now know and admire them. The strain originated in France, consisting of the largest, choicest, and most “phenomenal” specimens that could be selected. Phenomenal Pansy exhibits those captivating wine red shades that are so rare among flowers.

Oriental Poppies rank high among spring flowering perennials because of their stately growth and beautiful flowers. A planting adds greatly to the charm of a bed or border during May and June. Large flowers, often measuring 6 inches across are produced on strong, erect stems 3½ feet high. The colors are simply beautiful and brilliant. Whether grown as specimens or in the mixed border, the plants always have a distinctly noble appearance. It is advisable to closely surround Poppies with other perennials or annuals as the foliage dies down after the flowering season, coming up anew to lend a handsome effect.

**Early Flowering Spencer Sweet Peas**

Innumerable flowers of true Spencer type, but come into bloom one or two weeks earlier. If the flowers are kept picked, this type will continue to bloom as long as the Summer-flowering Spencers. Extensively grown in the South and other sections where the Summer-flowering Spencers usually fail. This is the type the florists use for winter forcing.

Plants are easily and quickly grown from Maule's bulbs and roots. With but little care excellent results may be obtained. A generous supply of bulbs, roots and plants may be obtained at a very small outlay, for the first cost is practically the only expense.

Important: Many of our customers order bulbs and roots during the winter months to plant in pots for house culture or to start into growth so as to have them ready to set out-doors when conditions are favorable. We will, therefore, on receipt of all orders, send such bulbs and roots as may be planted indoors or which, if not wanted for immediate planting, can be safely kept until the proper outdoor planting time.

With every order for bulbs or roots a copy of our booklet, "Flowering Plants from Bulbs and Roots," will be enclosed free. It contains many helpful suggestions on the culture of bulbs and roots. By following the simple directions given, everyone should succeed in growing beautiful plants.

WM. HENRY MAULE, PHILADELPHIA, PA., 1931
The Gladiolus is one of the most popular and beautiful of the summer flowering bulbs with tall spikes of flowers, some 2 feet or more in height. Of almost every desirable color, blotted and spotted in the most curious manner, they have absolutely no insect enemies and no diseases, and best of all, they will grow and bloom in any soil. We have, therefore, decided to offer any one to fall with them. They are beloved.

From a long list of named Gladiolus we have selected 32 varieties which we consider the best as to color, form and size of flowers. We offer 20 varieties on this page and 12 on the next one. Many prefer named sorts, so as to have the colors they most desire. Mixtures of all colors in the large-flowered Gladiolus, as well as the Primulina type, are offered on next page.

Maule’s Hardy Everblooming Roses

Widely known as “Monthly Roses”

2-Year-Old Heavy, Healthy Field-Grown Plants

The so-called Everblooming Roses are the Hybrid Teas and the Teas. They do not bloom all the time, but if kept pruned and cultivated, one crop of flowers succeeds another at brief intervals throughout the summer.

They are among the most beautiful of all Roses. Although hardy, they do best if given some protection in winter. A light covering of straw or manure is all that is necessary; or an equally efficient protection may be obtained by keeping the soil, say, eight inches deep about each plant—removing same, of course, in early spring.

We offer below, in our opinion, a list of the most popular varieties—only such roses as have proved their worth in gardens throughout the country. They will do well in a great variety of soils and if properly cared for, will bloom the first year.

Nine Select Everblooming Roses

90N08 Angele Pernet. Distinct in color, a rich, vivid, coppery-orange-yellow in which it is not approached by any other Rose. Its buds are long, opening to semi-double cupped fragrant flowers. An indispensable variety that you will love for its wonderful color.

90N09 Briarcliff. Fragrant and long lasting; large pointed buds and double, rich, coppery-yellow centered blooms of brilliant rose pink. Stem stiff and strong; foliage resistant to disease. Free flowering.

90N10 Dame Edith Helen. The immense flowers are composed of broad petals which curl back prettily forming a glorious long pointed bud and a full double flower which is beautiful in every stage of development. Color a brilliant clear pink; sweet-scented.

90N12 Etoile de Hollande. A strong vigorous healthy grower and free bloomer which like the popular Radiance Rose, improves in vigor from year to year. It is a continuous bloomer with large, moderately double flowers that are particularly attractive. In color a brilliant crimson red.

90N33 Kaiserin Augusta Victoria. The grandest white rose in cultivation. A continuous bloomer, producing quantities of snow-white flowers tinted with just enough lemon in the center to relieve the white. Remarkably fragrant.

90N41 Lady Ashton. One of the best garden Roses and a fine long lasting cut flower. Flowers large, sweetly scented, of a pleasing carmine-pink shading to a golden-yellow base.

90N76 Rev. F. Page Roberts. A Rose of remarkable color and the outside. The long pointed buds are large, a coppery-yellow shaded red on the outside and open to good full double fragrant flowers of a golden-yellow particularly rich colored in late summer and fall.

90N91 Talisman. The Rose which was awarded more Gold Medals than any other American Rose. It is a most remarkable piece of coloring; a combination of shadings of gold, apricot, yellow, deep pink and old rose. The bud is long, well formed and develops into full double flowers. The plant is a strong grower, and free flowering.

90N45 Los Angeles Improved. (Willowmere.) This splendid Rose is of a coral-red; suffused with carmine in the bud stage, and opens to a large, full, handsome flower of a rich shrimp-pink, shaded yellow in the center and flushed carmine-pink towards the edges.

Climbing Roses and Ramblers are most valuable on account of their quick growth and hardiness. Wherever a good, strong, or ground cover is desired, or an unsightly spot is to be covered, this class of many lovely flowers is ideal and satisfactory in every respect. They provide a good chance for the porch, and cover within a short time arbors, walls, fences, and other structures. Maule's Hardy Flowering Shrubs

As the slogan of the American Association of Nurserymen aptly puts it—“It's not a Home until it's planted.” The proper utilization of ornamental shrubs and trees adds mightily to the attractiveness of the home surroundings. The following Shrubs lend themselves ideally to beautifying the home grounds.

94N17 Almond, Double Pink Flowering

One of the most popular early spring-flowering shrubs and an old-time favorite. The cheerful, button-like rose colored flowers envelop the branches before the broadly lanceolate dark green leaves appear. Grows to a height of 4 to 5 feet.

94N30 Deutzia, Pride of Rochester

94N21 Butterfly Bush

(Buddleia variabilis magnifica)

One of the most desirable of summer-flowering shrubs, beginning to bloom in July and continues until cut down by severe frost. The long, graceful stems terminate in tapering panicles of beautiful lilac-colored flowers that are of miniature size and borne by the hundreds on a flower head which is frequently down to 15 inches long. Succeeds everywhere; flowers freely the first year. Grows to a height of from 5 to 8 feet. In cold localities the top usually freezes back and new growth starts from the root.

50c each; 3 for $1.35; 6 for $2.50; $4.75 per doz., prepaid

94N27 Flowering Crab Bechtel’s

Showy dwarf ornamental tree bearing large, double, fragrant clear pink flowers followed by ornamental fruits. Blooms profusely from the middle of May until early June. Very hardy, easily grown, and exceptionally fine as specimen on the lawn.
